Technical Skills

Networking

- Configured VLANs, NAT, ACLs, and OSPF on Cisco routers/switches using Packet Tracer, GNS3, and VMware labs.
- Installed and configured pfSense firewalls for NAT, DHCP, and VPNs (IPsec & OpenVPN) to simulate enterprise connectivity.
- Set up and troubleshooted DNS on Windows Server (AD-integrated zones) and Linux Bind (external zones).
- Configured DHCP services across multiple subnets in lab networks.
- Used Wireshark for traffic capture and troubleshooting VLAN, DNS, and routing issues.

Systems & Virtualization

- Installed and managed Windows Server 2022 roles (AD DS, DNS, DHCP, GPOs, Exchange) in lab environments.
- Worked with AlmaLinux servers to configure Apache web hosting (SSL, SELinux, CGI, PHP), Samba/NFS shares, and Bind DNS.
- Designed and deployed multi-site labs in VMware Workstation including domain controllers, pfSense firewalls, and file servers.
- Configured RAID-5 arrays, SAN storage (iSCSI), and backup strategies as part of storage/DR exercises.

Monitoring & Automation

- Installed and configured Zabbix server/agents to monitor Linux/Windows hosts and firewalls.
- Automated AD user/group provisioning, GPO deployment, and system backups using PowerShell scripts.
- Wrote Bash scripts for Linux administration (user management, service monitoring, backups).
- Developed Ansible playbooks for consistent Cisco router and Linux server configuration.

Cloud Networking (In Progress)

- **Microsoft Azure:** Deployed Windows/Linux VMs using Dashboard & PowerShell; connected via Azure CLI, SSH and Putty; configured Apache with DNS on Linux VM.
- **AWS:** Launched EC2 (Linux/Windows), connected with SSH/CLI, configured IAM roles, Elastic IPs, and Route 53 DNS; deployed LAMP stack with SSL/TLS; tested Auto Scaling Groups with Load Balancers.

Web & Database Programming (Vanier AEC)

- Developed a **Java Tax Calculator** with input validation and calculation logic.
- Built a **Weather App** with HTML, CSS, and JavaScript to fetch/display live data.
- Designed responsive websites (Omnifood, Tribute Page, Final Exam Project) with HTML5 & CSS3.
- Installed and configured Oracle SQL databases, optimized queries, and tested with SQL Server Management Studio.

Projects & Labs

Enterprise Network Lab (VMware + pfSense)

- Designed a three-site enterprise network with multi-domain Active Directory forests and replication.
- Implemented internal/external DNS using Windows Server and Linux Bind.
- Built secure site-to-site VPN connectivity with pfSense firewalls.

Cisco Networking Labs

- Configured VLANs, ACLs, and OSPF in Packet Tracer & GNS3 to simulate enterprise LANs.
- Validated routing and security rules with Wireshark packet analysis.

Infrastructure Services

- Built RAID-5 storage with centralized backups.
- Deployed cross-platform file and web services (Apache, Samba/NFS).
- Integrated Zabbix monitoring for proactive alerts and availability tracking.

Automation Labs

- Automated AD tasks (user/group provisioning, GPOs) with PowerShell.
- Wrote Ansible playbooks for Cisco routers and Linux servers.
- Created Bash scripts for routine Linux admin tasks.

Education

AEC – Network Administration (NET-45)

John Abbott College – Montreal, QC | *Expected Graduation: Dec 2025*

AEC – Web and Database Programming

Vanier College – Montreal, QC | *Completed: 2024*

Experience

Lending Operations Associate III – BMO Financial Group | Montreal, QC | Nov 2022 – Nov 2024

- Validated and troubleshooted backend loan records across NCCS/MECH systems.
- Applied Excel automation and compliance workflows to ensure accuracy and efficiency.

Customer Service Representative – Everyday Banking – BMO

Financial Group | Montreal, QC | Feb 2022 – Nov 2022

- Resolved client account and security issues with clear, step-by-step guidance.
- Built communication and problem-solving skills valuable for IT teamwork and support
